

# Drizzle

## Drain Tubes Cleaner - Ready to Use

**DRIZZLE** is the solution specifically designed for the maintenance of the condensate drain, formulated to remove dirt and deposits that can slow or block the flow of condensate drains. Its formulation is effective on scales, mold, algae and organic residues.

Use **DRIZZLE** at constant intervals does not damage the metal and prevents the formation of new obstructions.

Instructions: pour **DRIZZLE** directly into the condensate drain until it is full, taking care not to spill any excess. Wait 5 minutes for the product to start to flow down with the removed dirt and deposits, and pour a new quantity. Let **DRIZZLE** work for complete cleaning of the condensate drain. The amount of product is to be determined according to the degree of clogging and the system size.

**DRIZZLE** must be used by experienced professionals, provided with the specific personal protective equipments.
